

QUnit Roadmap

@leobalter

strict semantic versioning

`major.minor.patch`:

- **major** breaks old features.
- **minor** introduces new features.
- **patch** fix bugs and regressions.

Ref: <https://t.co/5vBoII01K6>

strict semantic versioning

`major.minor.patch`:

- **patch** never introduce a new feature.
- **minor** always contain new feature(s).
- **patch** and **minor** doesn't break any feature.
- **major** does not introduce any new feature

same approach from **Ember 1.x** to **Ember 2**

Every new introduced feature requires a lot of discussion and good arguments, regrets are not welcome.

JUnit is 7 years old

- not old
- **mature** and **opinionated**
- still in **active** development

Past year

- **1.16.0** - Dec 3, 2014 -
- **1.17.0** - Jan 19, 2014
- **1.18.0** - Apr 3, 2015
- **1.19.0** - Sep 1, 2015
- **1.20.0** - Oct 27, 2015

Last Release

- QUnit.only
- Support Symbol types on QUnit.equiv
- Nested modules

Nested Modules

```
QUnit.module( "module b", function() {  
    QUnit.test( "a basic test example 2", function( assert ) {  
        assert.ok( true, "this test is fine" );  
    });  
  
    QUnit.module( "nested module b.1", function() {  
        QUnit.test( "a basic test example 3", function( assert ) {  
            assert.ok( true, "this test is fine" );  
        });  
    });  
});
```

What is next?

QUnit 2.0

<https://github.com/jquery/qunit/issues/891>

Before 2.0

- **EventEmitter** based on js-reporters' specs
- **`QUnit.reporter`**
- **Warnings** for deprecated messages
- Features without breaking the current API

release.on(2.0)

- Remove the deprecated methods
- Throw warnings saying they were removed
- Drop support for **ES3**
- Move support to **ES5+**

release.on(2.1)

- Remove all the warnings for 1.x deprecated and removed methods

Last 1.x.x version

+

Without warnings

===

Easy Upgrade to 2.0

More and more features

- **QUnit.pending**
- Integration with **chai.js**
- **beforeAll/afterAll** hooks
- ?
